## Descriptif de l'éditeur

Take orders directly from the customer's table.

- Manage tables in real time, with the ability to enter and store order information from any other stationary or handheld workstations.
  - Immediately send orders out to one or more remote printers (kitchen, bar, fish prep area, etc.)
  - Send orders and comments back and forth between the dining room and kitchen.
  - Request checks and payment right from the Pocket PC, ...
- Immediately cost-effective !
- Speeds up service and enhances table turnover, making your restaurant more profitable.
  - Improves your organisation and personnel management.
  - Enables servers to take efficiently care of more guests.
  - Controls orders flows (kitchen, bar, etc.) more effectively.

Using the same interface as your main program for PCs makes pos-soft handle training a snap !

Pos-soft handle gives servers all the tools they need. The training is very fast and easy even for servers with little or no computer experience. Its intuitive interface uses icons representing the various functions. So simple yet so powerful !

As soon as an order is entered, it is immediately sent to the central computer that handles remote printing (for example, in the kitchen, bar or seafood prep area).

You can even start taking an order on a Pocket PC, continue it on a stationary computer and finish it up on yet another Pocket PC!

You cannot loose data if the WIFI network is accidentally cut off or if the battery is discharged or changed, whether you are carrying the Pocket PC or taking an order
