Descriptif de l'éditeur

With CamLAN you see your WebCam/NetCam video on all PCs within your LAN or over the Internet. It supports Webcams, Netcams (IP-Cams) (in still picture mode and in motion-JPEG mode) and all video devices which are working with an up to date driver for Windows. CamLAN has a built-in video network server/client functionality which shows the video from all connected video devices on all PCs. Additional CamLAN has an integrated webserver! So you could easily view all cameras live by simple HTTP request in your webpage. The webserver makes it possible to control the program from remote. You could start/stop the video recording, capture a picture and start an external program. Picture capturing and video recording with timestamps and an overlay image is possible. Multiple languages support!
