Descriptif de l'éditeur

Uninstaller and logger which is designed to log all the changes made your hard drive or registry whenever you install new software, and then show you exactly what changes have been made and where. Easily track, view, and monitor any files and registry keys added or removed on your hard drive or registry. This provides a sure way to identify if any viruses or spyware were placed on your system during software installations, and also allows you to make sure all uninstalls have removed the necessary files. You can always see if any hidden programs, adware, rogue programs, spyware, or program dlls are installed without your knowledge. You can also create and save lists of each comparison so that you may reference these changes later, and you have the option to print if you wish. Uninstalls tend to leave many garbage files behind, and many programs install extra files or folders, adware, or unnecessary spyware, but this program will allow you to scan your system and keep a history list of exactly what changes have been done on your pc for later cleanup. (Runs on all Windows systems).
