Descriptif de l'éditeur

FTP client for uploading and downloading any file types, and performing directory and file manipulation with an explorer-like interface. Supports both binary and ascii transfers, and contains all the important host functions like making new directories, deleting files, removing directories, and renaming files. Also allows you to create saved lists of commonly uploaded files. You can even sort your server lists by file type, alphabetical order, or by file extension. Uses compact code for faster file transfers and faster execution. (Installs on all Windows systems, and transfers to and from any server type.)
